Stress-Tested Live Neon PostgreSQL Ledge

Deterministic Layer `Plain Code & Postgres`

- SHA-256 cryptographic hashes seal each verified allocation.
- Neon Serverless PostgreSQL enforces ACID relational constraints.
- `v_ledger_totals` view computes live multi-currency totals.
- **Governs all money, balances, and immutable certificates.**

161 ms
Query Response Time

29
Aggregated Allocations

Key Architectural Milestones Validated:

- **Recurring Patron Engine:** Global SQL aggregation tracks patron loyalty badges (e.g. *Stały Mecenas 3*).
- **Bidirectional Pagination:** Asynchronous "Load More" + "Show Less" with viewport snap-back.
- **Dual-Layer i18n:** Canonical Polish SHA-256 seal stays intact while rendering native English for judges.

*Prototype transparency: Simulated benchmark dataset. Real funds collected: 0.00 PLN (PayPal Sandbox Mode).
